THE DEVELOPER EDITION • VOL. 01

# AJ'S WORLD

A DEVELOPER'S DIARY

**ANGELA JAHZIEL ENCABO**
Third-Year Bachelor of Science in Computer Science
Section F2 · Cebu Institute of Technology–University

BIG IDEAS. A LITTLE GLITTER. CODE WITH A PURPOSE.

*A portfolio concept built around creativity, intentional choices, and technology that makes ideas tangible.*

**PROFILE PHOTO / AVATAR PLACEHOLDER**

Add a real portrait or a clearly labeled illustrated stand-in here.

Suggested treatment: pink cutout portrait, sparkles, chrome stars, and a “HELLO, I'M AJ!” sticker.

VISUAL DIRECTION • HOT PINK / BUBBLEGUM / CHERRY / LAVENDER / SILVER / BLACK

# A Little About Me

**Angela Jahziel Encabo**
Third-Year Bachelor of Science in Computer Science · Section F2

I am a firm believer in the power of being intentional in how we think, act, and respond to others. Knowing what you want and making the choice to do what it takes to achieve or overcome it has been the compass that guides the decisions I make for myself.

Having lived in Cebu all my life, I have grown up in an environment that has become the backdrop to my experiences, interests, and ambitions. As a Computer Science student, I continue to discover how technology can become a way to turn ideas into something tangible—whether through software, interactive experiences, or systems designed to address real problems.

My interests lie at the intersection of technology and creativity. I enjoy exploring how systems work, figuring out how to solve problems, and thinking about how people will actually experience the things I build. Game development, in particular, allows me to combine logic with storytelling, while collaborative projects challenge me to communicate ideas, make decisions, and work toward a shared goal.

Some of my most meaningful milestones so far have come from taking these ideas beyond the classroom. From helping lead the development of BantAI Buddy, an AI-assisted child digital safety project, to creating games for competitions and game jams, each experience has given me a different perspective on what it means to build something with purpose.

I am still learning, experimenting, and finding my footing as a developer. I do not believe growth comes from having everything figured out; I believe it comes from being intentional about the choices we make and remaining willing to learn from them.

For me, every project is another opportunity to explore what is possible—and every line of code is a small step toward the person I want to become.

**Currently:** Building, experimenting, and turning ideas into projects, one commit at a time.

## Profile photo note

Use a real portrait if comfortable. Otherwise, use an illustrated avatar clearly captioned “AJ's digital avatar — profile illustration.” Do not present a stand-in as a real photo.

# Skills & Tech Stack

The ratings below are proposed self-assessments on a 0–100 scale, not measured proficiency results. Review and adjust every score so it reflects your current ability.

| SKILL | SELF-RATING | VISUAL SCALE |
|---|---|---|
| Programming & Logic | 75/100 | |
| Game Development | 80/100 | |
| UI/UX & Interface Design | 70/100 | |
| Systems Analysis & Design | 75/100 | |
| Database Design | 65/100 | |
| AI Integration | 65/100 | |
| Creative Problem-Solving | 90/100 | |
| Team Leadership & Communication | 80/100 | |

## Skills in words

**Programming & Logic:** I enjoy breaking down problems into smaller, manageable steps and using programming concepts to turn solutions into working applications.

**Game Development:** I work with game mechanics, player interactions, dialogue systems, and scene logic to bring interactive ideas to life.

**UI/UX & Interface Design:** I consider how users navigate and interact with a system, with attention to layout, clarity, visual hierarchy, and the overall experience.

**Systems Analysis & Design:** I am interested in how different parts of a system work together, from its requirements and workflows to its underlying logic.

**Database Design:** I have experience exploring how information is structured, stored, and managed in database-driven applications.

**AI Integration:** Through collaborative projects, I have explored integrating AI services into applications to support practical, people-centered solutions.

**Creative Problem-Solving:** I enjoy looking at challenges from different perspectives and finding approaches that balance functionality, creativity, and purpose.

**Team Leadership & Communication:** Collaborative projects have helped me practice coordinating work, communicating ideas, and contributing toward shared goals.

## Tech stack strip

Potential technologies to list—only keep those you can reasonably explain or demonstrate: C, C++, C#, Java, JavaScript, HTML/CSS, GDScript, Godot, Node.js, PHP, MySQL, and Microsoft Azure AI Services.

# Featured Projects

Show your role, tools, and outcome clearly. Add screenshots or GIFs to the live site where available, and make sure each repository link works.

01 · AI & DIGITAL SAFETY

## BantAI Buddy

**My role:** Team Lead · Collaborative project

An AI-assisted child digital safety tool designed to help protect children from harmful online interactions while encouraging healthy digital independence. Project materials describe features such as detecting concerning content, filtering harmful language, and notifying parents or guardians.

**Tools used:** JavaScript, HTML/CSS, Node.js, Microsoft Azure AI Services (confirm your exact contribution and stack).

**Outcome:** You report earning 1st Runner-Up in the IBPAP Can You Hack-IT Challenge 2025 and presenting the project at the SRG 10th Asian Philanthropic Development Conference.

https://github.com/oseyunnn/BantAI-Buddy

02 · GAME DEVELOPMENT

## Salamin at Bakal

**My role:** Game Developer · Team project

A game development project created for the DOST Central Visayas Next Level: Esports Game Dev Challenge. It demonstrates experience in interactive development and creating a game within a competition setting.

**Tools used:** Godot Engine, GDScript, and any third-party libraries or assets actually used.

**Outcome:** You report placing Fourth Runner-Up in the DOST Central Visayas Next Level: Esports Game Dev Challenge.

https://github.com/binggbongg/dost-game-dev

03 · CREATIVE TECHNOLOGY

## Crossroads of Us

**My role:** Game Developer · UPCSG Game Jam entry

A 2D top-down psychological romance game exploring love, doubt, overthinking, and the paths we choose. Players observe their surroundings for anomalies that reflect relationship anxieties, with choices shaping the experience.

**Tools used:** Godot Engine, GDScript, and Dialogue Manager (verify the tools and plugins used in the final project).

**Outcome:** Developed as an entry for the UPCSG Game Jam 2026, combining gameplay logic, narrative design, dialogue, and environmental storytelling.

https://github.com/DareDevilLuc/Game-Jam

## Optional fourth project

**CampusTails** — a campus pet monitoring system with pet information, vaccination records, and care-history tracking. Consider adding it if you want to show more database and systems development work. View repository.

Before publishing: verify exact award titles, event names, repository ownership, tools, and your personal contributions. These descriptions are drafted from the details supplied and should be checked against official records and project files.

# Dear AJ...

*Have a project idea, want to collaborate, or just want to say hello? Leave a little note in my inbox!*

| | |
|---|---|
| **Your name** | _____ |
| **Your email** | _____ |
| **What's this about?** | ■ Project collaboration ■ Questions about my work |
| | ■ Feedback or just saying hello |
| **Your message** | |
| | |

**Website behavior requirement:** after a visitor submits the online form, validate required fields, send the message to a real handler, and display a confirmation only when the submission succeeds. Provide a useful error message if it fails. A paper/PDF mockup cannot itself send messages.

## Suggested success message

*“Your note is ready! Thanks for stopping by and taking the time to write. I'll be in touch if a reply is needed.”*

## Suggested contact links

GitHub: github.com/oseyunnn
Add a professional email address or other public profile only if you want visitors to contact you there.

# Your Magazine Layout

**01 — THE COVER**
Name, portrait or labeled avatar, degree, tagline, and navigation.

**02 — THE STORY**
Autobiography, background, education, interests, and milestones.

**03 — THE SKILL SHEET**
Self-assessed skills chart, short descriptions, and tech stack.

**04 — THE PROJECT CLOSET**
At least three projects with roles, tools, outcomes, and working links.

**05 — DEAR AJ**
Contact/feedback form with validation and a real submission response.

# Pre-submission checklist

- ■ Add a current profile photo or a clearly labeled avatar.
- ■ Confirm personal details in the autobiography; add any schools, interests, or milestones you want included.
- ■ Review each skill score and keep only ratings you can honestly defend.
- ■ Verify each project's tools and your personal contributions.
- ■ Confirm award wording and conference details against official records.
- ■ Test every project and GitHub link.
- ■ Make the online contact form genuinely functional; test success and failure states.
- ■ Check mobile responsiveness, contrast, and body-text readability.

**DESIGN NOTE**

*Let the design be loud, but let the work speak clearly. Hot pink, chrome details, sticker-like labels, hearts, and stars can make the portfolio memorable while clear project descriptions demonstrate your skills.*

This PDF is a content and design guide, not a deployed website. The next implementation step is to build the responsive HTML/CSS/JavaScript pages, interactive skill chart, project cards, and working form.
